1. A funny image shared online.
 2. A cultural idea that spreads between people.
 3. A computer program that copies itself.
 4. A type of genetic mutation.
-

2

Why did Dawkins compare memes to genes?

1. Both can spread, change, and compete over time.
 2. Both are stored inside human DNA.
 3. Both were discovered by biologists in the 1800s.
 4. Both only exist in science laboratories.
-

3

Which example below is closest to what Dawkins called a “memplex”?

1. A single joke told once.
 2. A school mascot.
 3. Democracy, along with ideas like voting and human rights.
 4. A viral dance trend on social media.
-

4

What is one important idea the passage suggests about culture?

1. Cultural ideas never change once created.
 2. Only scientific ideas survive over time.
 3. Ideas compete for people’s attention, and some disappear.
 4. Memes only spread because of the internet.
-

Answers

1.

- B** — Dawkins described memes as cultural ideas or behaviors that spread through imitation.
- 2.
- A** — Like genes, memes evolve by spreading, changing, and competing for survival.
- 3.
- C** — A memplex is a group of connected ideas that reinforce one another, such as democracy and human rights.
- 4.
- C** — The passage explains that ideas compete socially, and only some survive and spread widely.
