

Brain Blast, Computer Science History Trivia

(SAMPLE)

1. In the 1840s, one visionary described a machine that could go beyond arithmetic and even compose music if programmed correctly. Today, many consider this idea a distant ancestor of modern AI. **Who was this person?**

1. Alan Turing
 2. Grace Hopper
 3. Ada Lovelace
 4. Claude Shannon
-

2. One of the world's most famous computer terms came from a real insect causing trouble in an early machine. **Which computer pioneer famously documented a moth trapped in a relay and helped popularize the term "bug"?**

1. Steve Wozniak
 2. Grace Hopper
 3. Tim Berners-Lee
 4. Dennis Ritchie
-

3. The computer that guided the Apollo astronauts to the Moon had less processing power than a modern smartwatch. **What was the name of the computer used in the Apollo missions?**

1. ENIAC
 2. Deep Blue
 3. Apollo Guidance Computer
 4. Altair 8800
-

4. In 1997, a chess-playing computer defeated world champion Garry Kasparov, signaling a major moment in AI history and hinting at the future of machine intelligence. **What was the name of that computer system?**

1. Watson
 2. AlphaGo
 3. HAL 9000
 4. Deep Blue
-

Answers

1. **C) Ada Lovelace**
2. **B) Grace Hopper**
- 3.

C) Apollo Guidance Computer

4. **D) Deep Blue**
